

Appln. No. 10/557,107
Amendment dated May 29, 2009
Reply to Office Action of March 5, 2009

RECEIVED
CENTRAL FAX CENTER
MAY 29 2009

Amendments to the Specification:

Please amend the paragraph beginning at page 8, line 7 as follows:

This communication is received by the conventional (non-dedicated) communication server. The communication server recognizes the message addition code and sends the communication to the system server in reaction to this. It is also possible to send all communications of users registered for message addition to the system server and to have the check for presence of a message addition code be carried out by the system server. The system server reads the communication (step 302) and checks whether the sender is registered (step 303). If the sender is not registered as a user, a communication-not-processed procedure 304 is followed and a non-processed communication is sent to the sender recipient via the communication server. If the sender is registered, the system server checks the credits account of the user (step 305). In case of an insufficient account, the non-processed procedure 304 is again applicable. If the account is sufficient, the system server checks whether there is sufficient space for the commercial message to be added (step 308). If there is insufficient space, the system server may (if necessary for the chosen medium) create an extra communication
